# 1 Introduction

In this paper, you will read about what is a portfolio website and how I develop my Portfolio Website. I explained clearly step by step how I do coding and which tools I used in coding part, design part and how I work with GitHub. My entire project structure how works, as well as how I manage the files and documents with information about myself in developing MY Portfolio Website.

Portfolio Website is a very important for a Software Engineer, Because all Software Engineer want to show their Education background, Skills, Projects, Experience and so other thing. Now a days every software developer when apply for a job beside the CV they also share the portfolio link, and it help them to get a job fast with high chance. For a student of software engineering it is also important to develop a portfolio website and increase chance of getting a job position.

I am student of BEng Software Engineering and I developed a Portfolio website for myself. Having professional Portfolio website is very important for me, this is my Portfolio website link ([Emran Azizi Portfolio Website Link](#)) that shows my website with all information of myself. This is my Github Repository link ([Portfolio Repository Link](#)) that shows my GitHub where I putted my portfolio website files and documents. I develop this website because of showing a clear description of myself and what skills I use in developing my Portfolio website and my educational background with my projects and all my experience.

# 2 My Personal Branding

I am Emran Azizi student of BEng Software Engineering at GISMA University OF Applied Sciences in Berlin Germany. My Personal Brand is passionate to become a skilled software engineer in Web Development, Software design and a professional motivated software engineer that always like developing software and websites. The Portfolio Website I developed it show my motivation and my focus on improving my skills in Software Engineering. I am eager to to my best on my responsibility and the tasks that belong to me. I am punctual and motivate student and want to continue my degree up to PHD and achieve my Goals.

## 4 Developing Website Structure Project

At first I made a small project for developing my portfolio website, then I classified what should I do and from first step up to the end step what I need to do which information I put and how I can achieve my project goal which is having a professional Portfolio Website that matched on my filed.

### Developing Portfolio Website Structure Steps are:

- 1:Which Tools I need and Identifying them.
- 2:Choosing Programming language HTML and CSS.
- 3:Coding in (VS CODE Software).
- 4:checking codes and debugging.
- 5:Managing Information and Data in Website.
- 6:Working On GitHub and making page.
- 7:Website Test Part.
- 8:Reviewing the Entire parts and getting result.

### 4.1 Tools which used for developing website

- I used (**VS CODE**) Software in my coding part. VS CODE Software is a very powerful and well designed Software which software engineers able to do coding and use different features of software which allow software engineer for reaching their goals fast.

- **GitHub** is another software that I used it and I added my files and documents on it and I develop my Portfolio Website. Because GitHub is a free interface which allow users to make more repository and do their tasks.

### 4.2 Developing Website Starting point

First I wrote my website information on paper that I want to put in my website then I think how to manage everything. After that I chose the programming languages languages with the tools and software I need to do my code. I used my developing structure project to reach my goal quick. ] Planned my website how many section should have that looks professional and which part what should have what types of information and data.

## 5 Website Design

The design part is a very important part which show your skills and show how software engineers use their skills in a effective pathways for developing something. I decided to make the background of my page be black and the texts be white. I decided to have a menu bar then my picture and my website have 6 section ( About, Contact, Certificate and Education,Skills, Experince and Project).

## 5.1 Design Structure

1 - About section belongs to my picture and a short introduction about myself. Then I putted my CV in a small badge which is clickable and you can read my CV PDF.

2 - Contact section show details like Email, LinkedIn and GitHub and allow people to be connect with me different platforms.

3 - In Certificate and Education Section I write about my Education background and Certificate I achieved with a clickable View Certificate PDF badge. Then I mentioned information about my languages and what I studied during my Bachelor Degree.

4 - In Skills Section I mentioned what programming languages and other professional skills which help me in my job and academic area.

5 - Experience Section shows my job positions I worked.

6 - Project Section Show all my projects I participated and what I did on it. Also I putted Clickable View Project PDF.

## 6 Coding Section

I did my Code part in VS CODE Software, and chose HTML AND CSS Programming language for developing my Portfolio Website. I putted all of my code in one index.html file to have a quick access for searching my codes and changing them. I tried to have clear and more professional code to aim of having Professional website.

### 6.1 HTML Code Section

first I write HTML code and I write everything that I want to add in my Portfolio. the Information which I putted in my Portfolio belong to introduction, Education, Projects and Others.

### 6.2 CSS Code Section

After writing my HTML code, I wrote my CSS code and design the hole of my website such as: Background color, page layout, Menu bar, boxes, icons, budge and so other things. The style of my website I focused be like Dark and neon that match to my Personal brand.

## 7 Coding Test Part

When I was working in VS code I installed the live-server feature in VS code because it help me, anytime with one click I open my website and it able me to adjust my code in HTML and CSS fast. Then at the end when I completed all of my code for developing website I review the entire of my code and I click check my website that works well without and bug and other problem then I took decide to go in GitHub and create my page for security and other features that GitHub has free for Users.

### 7.1 Making Page On GitHub

first I make my Repository the I I create index.HTML file and I copy all of my code from VS Code Software then I past it on GitHub index.html file. Then I added every PDF and pictures in my repository and I rename them according my HTML part code. After that I save everything and I go to the setting then page and I create my page in GitHub.

## 8 Website Test

After Completing every section on developing my Portfolio Website I copy my website link and I check it in computer browser and phone browser, that everything is correct or not. When 100 percent my page work correctly then I end my Developing Portfolio Website Project.

## 9 Strengths and weaknesses Of My Mortfolio Website

As a Software Engineer Student I need to have a portfolio website, and I developed MY portfolio to show my skills and education background. My Portfolio website strengths is having a complete and professional layout and design because of having a quite well structured of the section such as: introduction, education section, skills part and projects. Also I added my CV and Certificates that shows My skills in developing of my Portfolio website.

About my Portfolio Website Weaknesses, I want to add other features in CSS part and JavaScript. Beside of this in the future I want to add more projects about my duties in different job positions, as well as I want to make my website so professional like matrix design. During my studies when I level up my web development skills I will change some information and add different design that shows my website as a professional Portfolio.

### 9.1 The Jobs which fits on my Educational Background

As a Software Engineer I need to work as a student job in My field and I interested in web development. Because I want to work in more real projects and have the real experience in Software engineering, also it helps me to face to new challenges and improve my skills in Software Engineering and Web-Development. Link of **(Working Student Web-Development)** - this is a job position need skills like: Python, HTML and CSS that I have these skills.

## 10 Conclusion

The Portfolio website I developed it shows my HTML and CSS skills on developing a website. Also I learned more things about my field and I am able to apply for job and show my website with my CV. All of these things build a powerful background for me and Motivated me to attempt more and study more for achieving my goals. In the future I will edit my Portfolio website to show my full professional skills in Software Engineering and I want to become a skilled Software Engineer.
